Rossum + SAP S/4HANA Cloud

Rossum is an official SAP Partner.

We have developed tried and tested SAP Certified integrations which connect with SAP's ERP products to enable the end-to-end IDP communication flow.

What it means to be Certified by SAP?

Fast, frictionless, proven.

Tried and tested by SAP - pre-built integrations jointly tested by Rossum and the SAP Integration and Certification Center (SAP ICC).

Technically aligned with SAP technology - the SAP ICC team have analyzed the integration software and certified that it works in line with the most recent SAP technology.

Out-of-the-box capability - proven OOTB interoperability with SAP S/4HANA Cloud.

Master data management - flexible matching algorithms intelligently match incoming records, while robust validation ensures data integrity.

Secure - the SAP ICC team have successfully scanned our Certified integrations for certain code vulnerabilities.

Accounting and line of business professionals have too many tools that don't talk to one another.

Integrating Rossum with their SAP ERP will help solve this problem, but integrations come with risks. **Research** shows that integration challenges are one of the main causes for failed IT projects.

A major risk to integration comes from errors and defects, rigorous testing is required to mitigate the risk.

That's why Rossum has partnered with SAP to develop a tried and tested SAP Certified integration, one that works and quickly connects to the latest version of SAP.

Automation Suite 1.0 for SAP S/4HANA Cloud

Say goodbye to manually typing data from one system to another. This integration extracts and sends validated invoice data with associated documents from Rossum to SAP S/4HANA, as well as the retrieval of master data from SAP S/4HANA to Rossum.

How do Rossum and SAP work together?

- Rossum performs invoice data extraction using trained AI which learns without the need for templates.

- Rossum automatically validates the extracted data by matching it with the following master data:

  - o vendor data
  - o purchase order data

- Rossum transforms the output data format to the desired format for SAP integration.

- Rossum pushes the extracted invoice data and PDF of the invoice to SAP.

- Rossum retrieves master data from SAP side on a scheduled basis using SAP.

Rossum + SAP

Speed up processes - streamline Accounts Payable (AP) workflows and improve the percentage of straight-through processing by combining the AI power of Rossum with SAP.

Reduce error rates - automated data matching to check for vendor, PO data and duplicate invoices.

Minimize risk - take the risk out of integration with a tried and tested solution that has been certified by SAP.
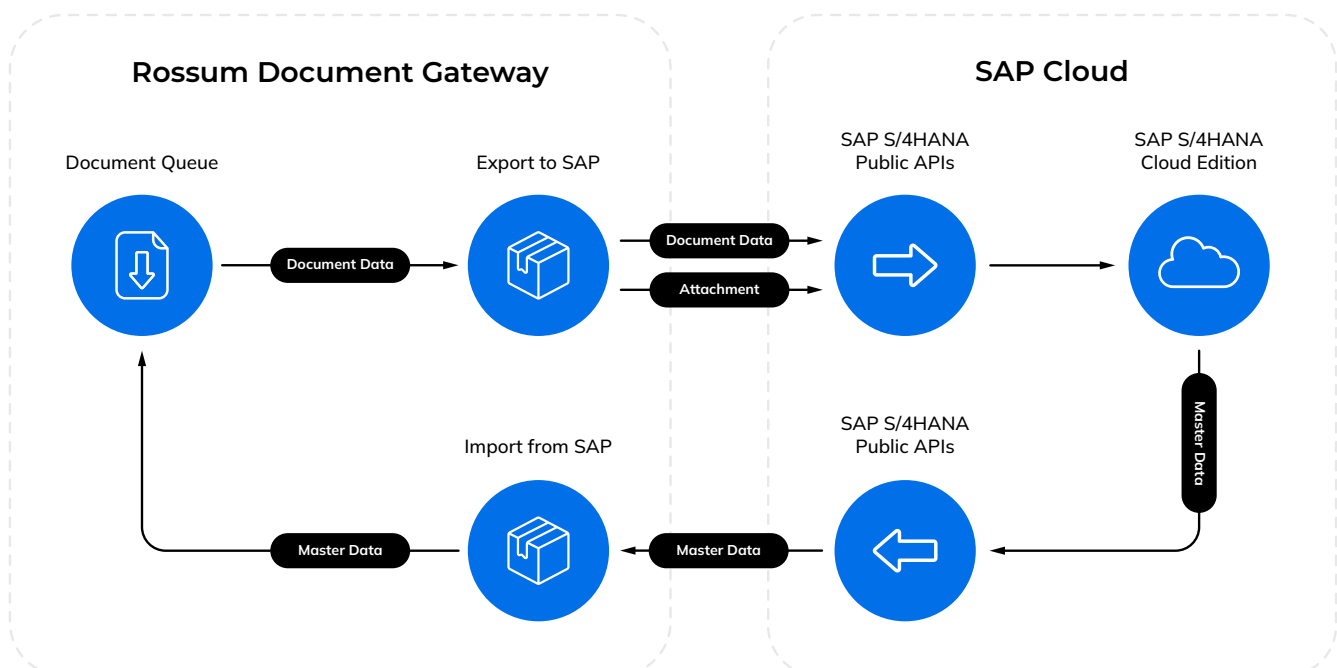

Work smarter, not harder - leave the drudgery of data processing to AI and empower your AP team to focus on more value add tasks.

Safe and secure

SAP Certification means that our S/4HANA Cloud integration is continually supported to ensure compatibility with the latest SAP technology. While our dedicated security, privacy and compliance teams ensure your data is protected. We follow security standards for integration with SAP APIs and also undergo regular audits for SOC 2 and ISO 27001 certification compliance.
