INTEGRATION

Intelligent document automation layer for SAP

Rossum provides a single AI-native document intelligence layer that turns any document into clean, structured SAP data.

- **One platform for global standardization**
Centralize document workflows across regions and business units in a single source of truth. Support local tax rules and e-invoicing while keeping global processes consistent.
- **Document-agnostic by design**
Process invoices (including e-invoices), purchase orders, sales orders, and logistics or trade documents in any format, from any channel - across AP, order management, and logistics teams.
- **Safe, proprietary AI**
AI that learns instantly from user feedback, supports 276+ languages including handwriting, and delivers high accuracy even on complex or unfamiliar document layouts.
- **Automation without SAP risk**
Keep document intelligence outside SAP. Eliminate template maintenance and custom code while delivering clean data, fewer posting issues, and minimal IT effort.

Smarter automation in every field - built for SAP enterprise complexity

Automate high-touch, exception-heavy document processes with AI agents that understand complex documents, validate data, and resolve exceptions before data reaches SAP, the way your AP or O2C specialists would.

- ✓ **Multi-format ingestion**
- ✓ **Line-item extraction and validation**
- ✓ **Supplier communication**
- ✓ **Master data matching**
- ✓ **Duplicates & fraud detection**
- ✓ **Exception handling**

Panasonic

“Our vision was to bring our order entry process to the next level: maximum speed, automation, and quality. Until now, LAPP had only used a very limited, template-based version of OCR to improve the order entry process across a few sales entities. With this central approach, we have deployed a state-of-the-art, AI-based solution designed to process orders quickly and efficiently, even when received in completely unknown formats.”

Pascal Kömpf
Head of Global & EMEA Sales Excellence

The business impact:

OPERATIONAL EXCELLENCE	Standardize document workflows across business units and regions with consistent quality, control, and governance, while respecting local specifics.
PROCESS VISIBILITY	Scale automation without scaling IT or headcount. Future-proof for growth, M&A, and regulatory change.
FASTER CYCLE TIMES	Gain centralized visibility into every document and SLA, eliminating blind spots across operations.
STRATEGIC VALUE CREATION	Strategic value creation: Free teams from manual work and unlock time for data-driven decisions, better cash control, and managing supplier relationships.
TALENT ATTRACTION & RETENTION:	Shift roles from repetitive data entry to meaningful exception handling and process ownership.

Keep SAP clean & IT lean

SAP® Certified
Integration with SAP Applications

Rossum integrates side-by-side with SAP, keeping your architecture stable, upgrade-safe, and low-maintenance as you scale.

- SAP-certified integration
- ECC & S/4HANA (Private & Public Cloud)
- API-first, Clean Core-aligned architecture
- No Z-modifications or invasive customizations
- Business-owned rules with enterprise-grade security

Protected by the highest standards in security & privacy

Backed by a network of SAP implementation partners
